

# **ECE 6400 - Project Presentation and Report**

Due: November 28, 2024

Presentations will be given during our regular lecture period at 10:30 am on Thursday, November 28. Each student is expected to attend and contribute at least 1.5-2 minutes to the presentation for their team. There will be one presentation per team, which should be approximately 15-20 minutes in duration, and summarizing the process from the initial design to final implementation with a description of any challenges, etc., along the way as well as how the team's module fits into the overall project design and implementation.

Each student should submit an individual report detailing their contribution to their team's code and development process, and how it fits into the entire project. There is no maximum page limit for this individual report, but it should be at least 2 pages and be self-contained and complete. Each student should submit their individual report to the appropriate D2L folder.

Each team leader should also submit a report on their team's final module design and implementation. Details should be given on the development process from the initial design to final product, along with info on any changes in design that occurred along the way. Info on the testing of each team's module should also be included in that team's report. Once again, there is no maximum limit on each team's submission, but it should be at least 10 pages single-spaced, and perhaps substantially more than that if done properly.

You should have your report submitted before giving your presentation so deadline for report submission is 27<sup>th</sup> of November before 11:59 pm.
